POLYU ENGINEERING ENTREPRENEURSHIP CLUB UNDERWATER ROBOTICS TEAM

NOVEMBER 2025

SPONSORSHIP PROPOSAL

The Hong Kong Polytechnic University

DEPARTMENT OF ELECTRICAL AND ELECTRONIC ENGINEERING

Meet Our Team

The Engineering Entrepreneurship Club (EEC) aims to engage undergraduate students in constructing robots for global robotics contests, foster designs and ideas to address industrial challenges, and promote innovation and entrepreneurial initiatives.

The EEC is a club under the [PolyU Department of Electrical and Electronic Engineering](#) that provides opportunities for students to participate in industrial projects and international competitions. The EEC also provides resources to support entrepreneurial initiatives and ESG.

Our mission

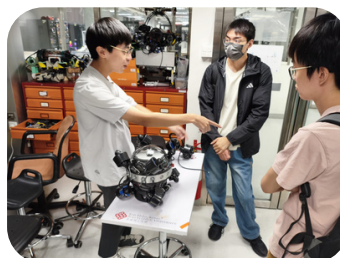

Discovering and Nurturing Talents

Our Underwater Robotics Team inspires innovative thoughts and teach skills to solve industrial challenges. We nurture students' interest in robotics, hone their skills and creativity to solve problems, and provide hands-on experience in team management..

Teaching and Learning

We equip our teammates with problem-solving skills and technical knowledge for innovation.

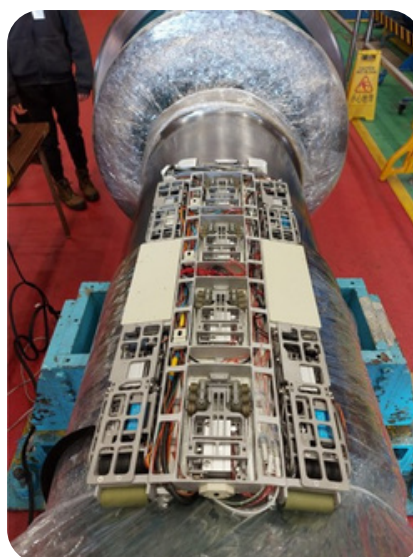

From Lab to Industry

Students with passion in solving industrial challenges are invited into our industrial project teams, where they follow guides from senior engineers to foster skills in solving industry-relevant problems all over the world.

Notable Projects

Our industrial project team worked on an inspection robot for stator EM core imperfections.

Empowering Tomorrow's Leaders

The ultimate goal of EEC is to empower students to build their innovative ideas. Equipped with engineering skills and industry experience, we encourage our members to invent and innovate, instilling an entrepreneurial mindset.

Inclusion & Diversity

The EEC brings together diverse talent from various cultural backgrounds. Students from different cultures work together for common goals. We are committed to equal opportunity, with more training provided for special needs.

SUSTAINABLE DEVELOPMENT GOALS

Teamorz Limited

A start-up founded by an EEC member, Teamorz is rebuilding our marine ecosystem by deploying innovative Artificial Reefs.

Giving Back, for the Future

Inspired by the UN Sustainable Development Goals (SDGs) for Quality Education and Industry, Innovation, and Infrastructure, we give back to our community through various educational outreach efforts. By holding workshops and mini competitions, we hope to increase access to robotics, as well as inspire invention and innovation in the field.

Our Achievements

Our club participates in two global robotics competitions: the [Marine Advanced Technology Education Remotely Operated Vehicles \(MATE ROV\)](#) competition as well as the [Singapore Autonomous Underwater Vehicle Challenge \(SAUVC\)](#). Our club has made remarkable impact in 2025 by making into the international finals of both the SAUVC and MATE competitions. Here are some of our key achievements:

- Rank 5, SAUVC Singapore AUV Challenge 2025 (Manta Ray)
- Innovative engineering award, SAUVC 2025 (Manta Ray)
- Rank 4, SAUVC 2025 (Serious Business)
- Rank 10, Singapore AUV Challenge 2024
- 15th Place, MATE ROV US Finals 2025
- 1st Runner Up, MATE ROV Hong Kong Regionals 2025
- 7th Place, MATE ROV US Finals 2024
- 1st Runner Up, MATE ROV Hong Kong Regionals 2024

Our Impact

The EEC mentored over 100 students from different majors at PolyU every year. [The EEC provides visits for secondary school students, inspiring over 200 young innovative minds last year. We ensure our sponsors receive high visibility and active promotion during our events.](#) The EEC holds mini-ROV competitions open to all PolyU students that helps new teammates get use to robotics competitions. We provide students with workshops and resources to build and test their own ROV. [Students showcasing their unique designs and solutions to real-world challenges.](#)

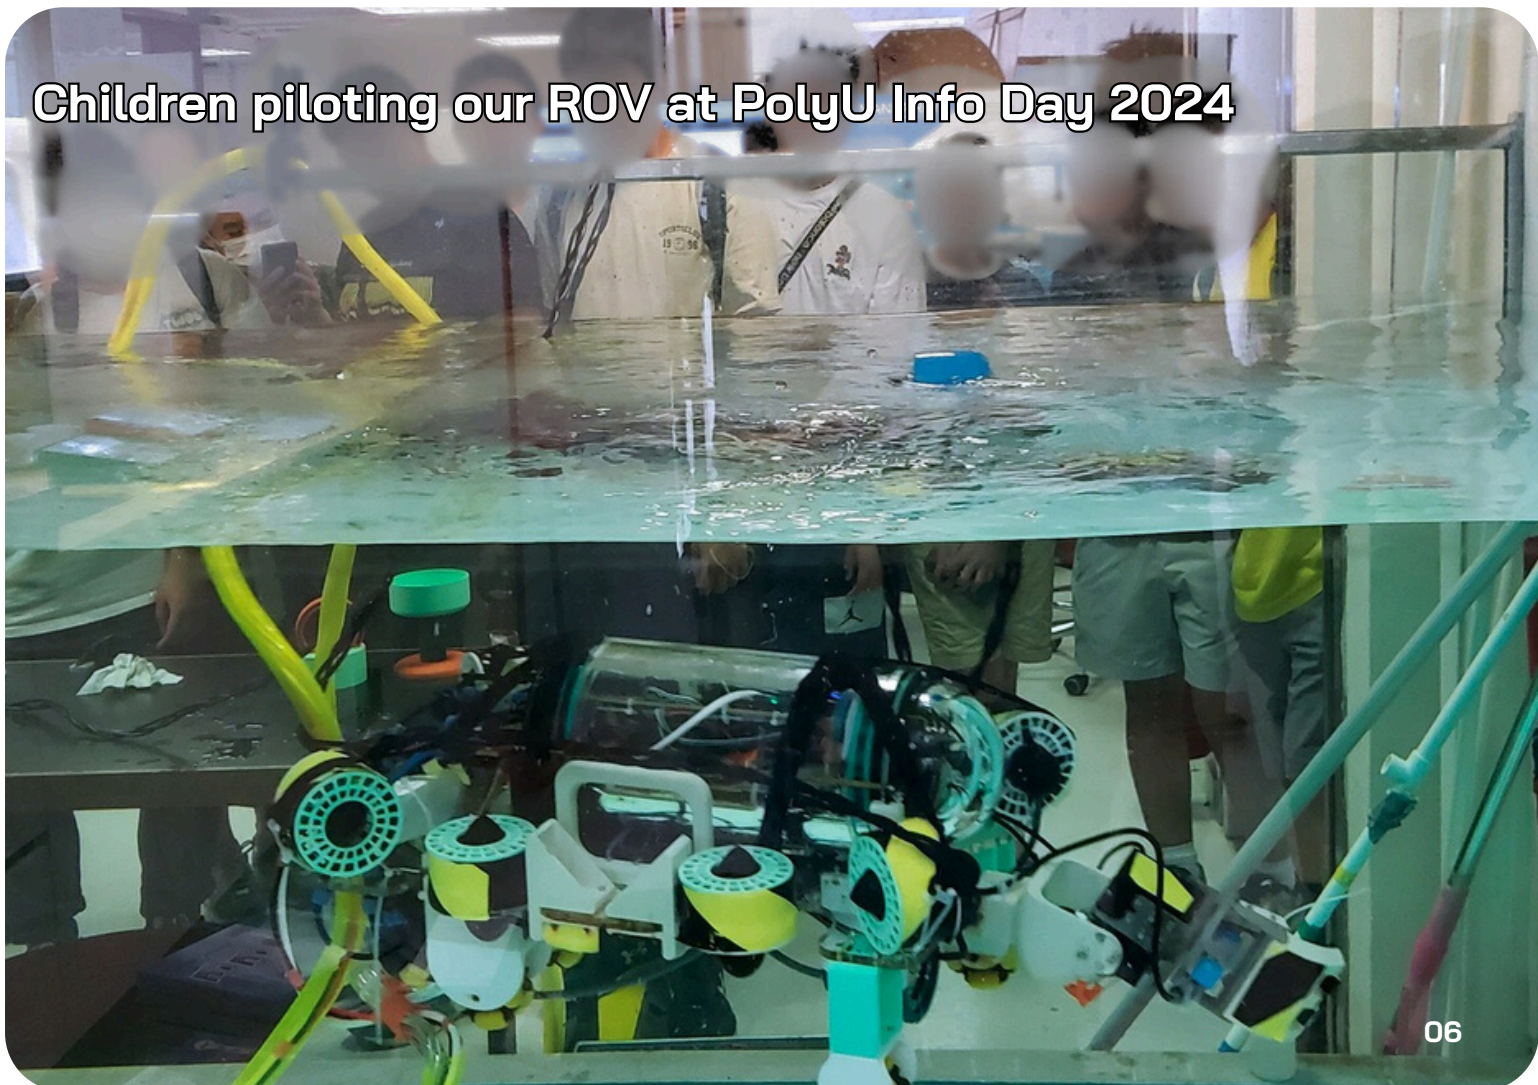

Outreach

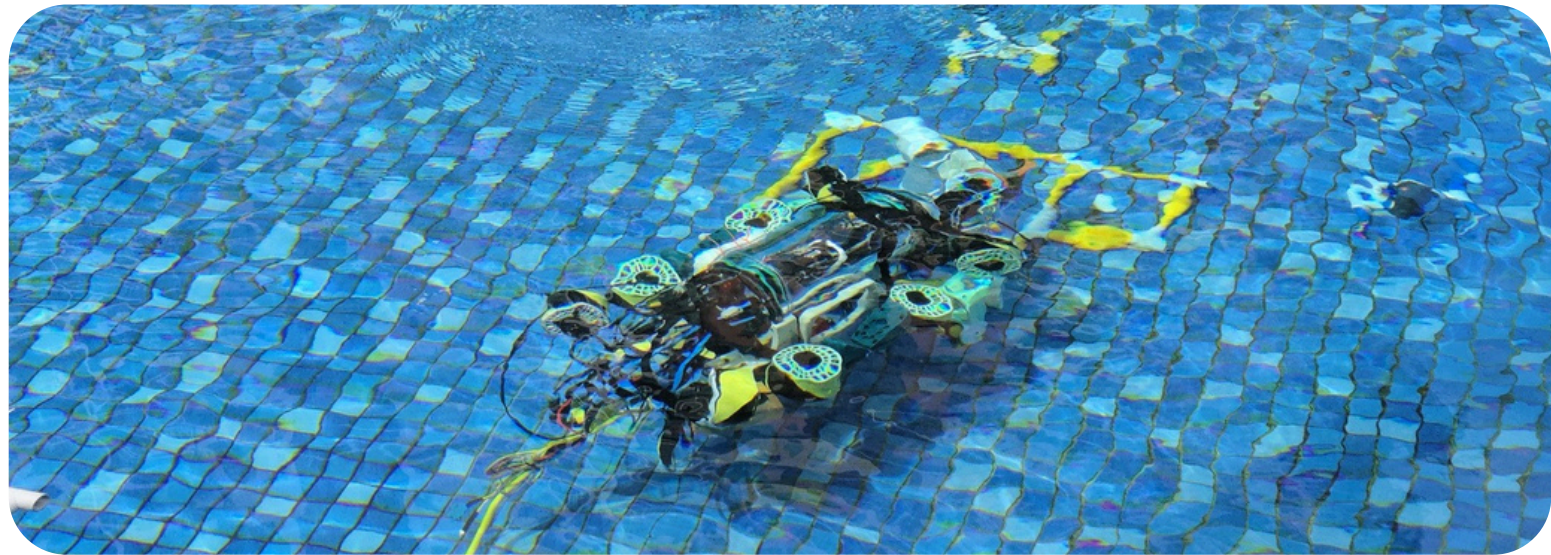

We are dedicated to promoting robotics education and fostering innovative ideas in STEM. We inspire the next generation of innovators while nurturing a sense of collaboration and community engagement. We regularly organize workshops and demonstrations to share our passion for robotics with our community.

Some of our activities:

- PolyU Info Day (annual): club and team info session, ROV and mini-ROV piloting demo
- SciFest 2023: educational sessions on electronics and programming for the general public
- IET Hong Kong (annual): ROV and mini-ROV demos to local high school students

Children piloting our ROV at PolyU Info Day 2024

Sponsorship

By sponsoring the PolyU Underwater Robotics Team, you helps cultivate talents in STEM education, [encourages innovation among youth](#). Your support will directly contribute in educating new developers of pioneering robotics technologies. Together, we drive innovation in technology and education for the future.

Benefits

Your logo will be printed on the EEC social media, we currently have [over 400 followers](#) and we often make [collaboration post with foreign universities like the University of Purdue, Beijing Jiaotong University](#).

We have a website with the department of EEE, we make promotions of our team and features the sponsors that year, and [promotional materials will provide invaluable exposure to the global underwater robotics community](#) as we show them during competition and secondary school lab visits.

Your brand will gain visibility in marine technology sector and educational sector. This sponsorship positions your company as a champion of innovation and education in a rapidly evolving field.

Sponsorship Tiers

Platinum Tier

HKD 20000 in monetary donations, goods, or services.

- Active promotion of your company's products/services on our social media platforms
- Logo featured on our ROV and AUV
- Includes all Gold Tier benefits

Gold Tier

HKD 10000 in monetary donations, goods, or services.

- Recognition in the team's introduction during competitions
- Includes all Silver Tier benefits

Silver Tier

Any sponsor in monetary donations, goods, or services.

- Logo featured on competition materials
- Logo placement on social media platforms Instagram, Facebook & website

We will use the resources for:

- Robots part cost
- Travel expenses
(Newfoundland and Labrador, Canada and Sanya city, China)
