POLYU ENGINEERING ENTREPRENEURSHIP CLUB UNDERWATER ROBOTICS TEAM

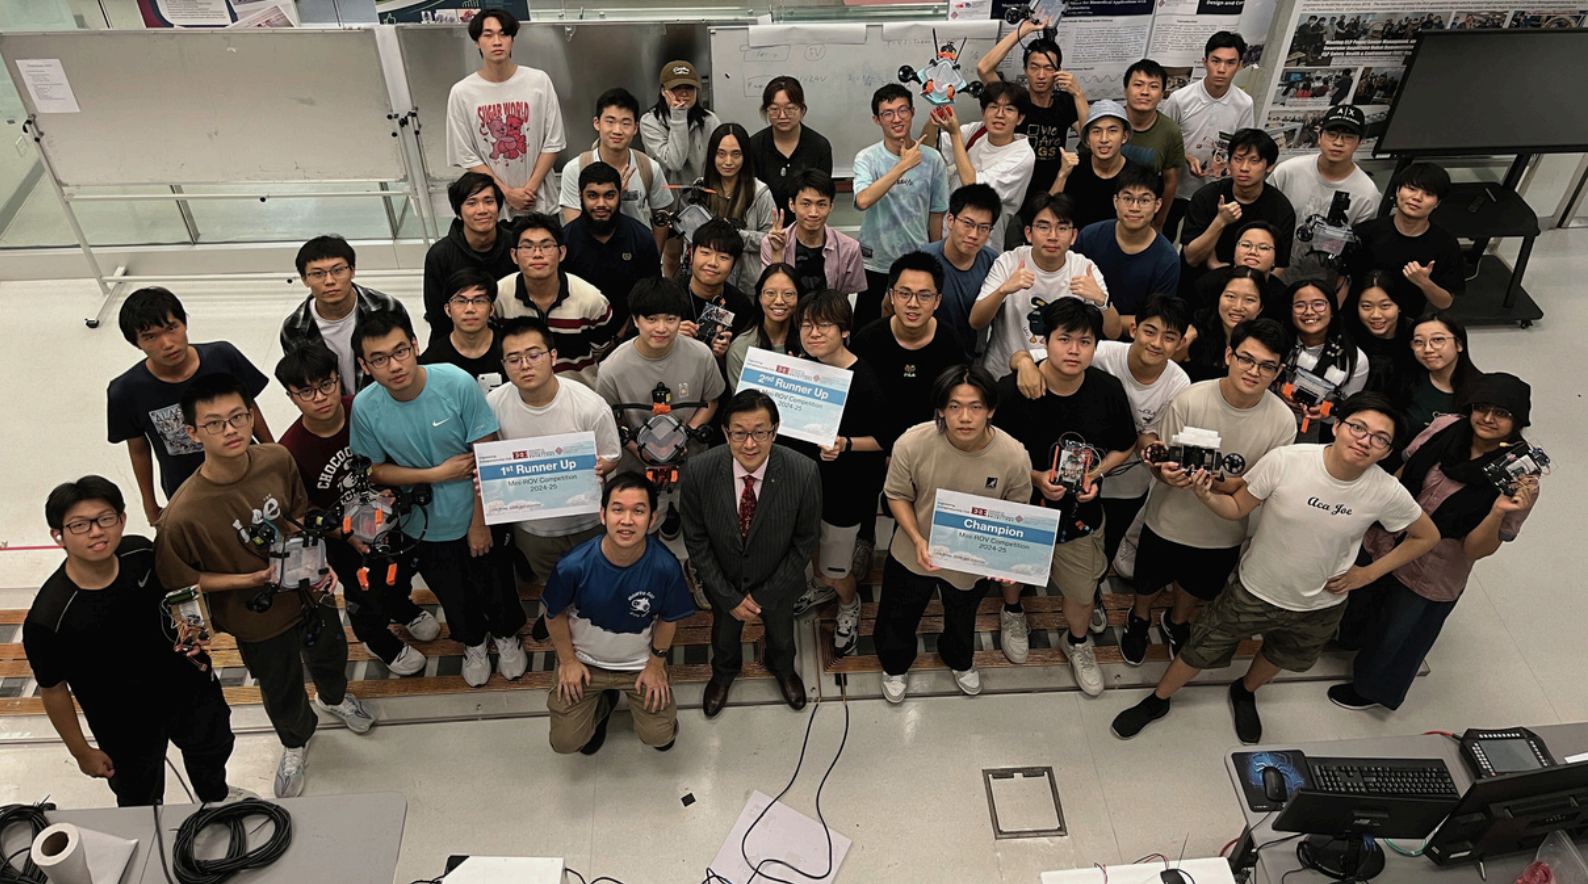

NOVEMBER 2024

SPONSORSHIP PROPOSAL

THE HONG KONG POLYTECHNIC UNIVERSITY
DEPARTMENT OF ELECTRICAL AND ELECTRONIC ENGINEERING

Meet our team

Who Are We?

The **Engineering Entrepreneurship Club** is a student-led organization under the **PolyU Department of Electrical and Electronic Engineering** that aims to engage undergraduate students in global robotics competitions, constructing robots designed to address deep sea challenges. In addition, we provide opportunities for students to participate in industrial projects, and resources to support their entrepreneurial initiatives.

What We Do

Discovering and Nurturing Talent

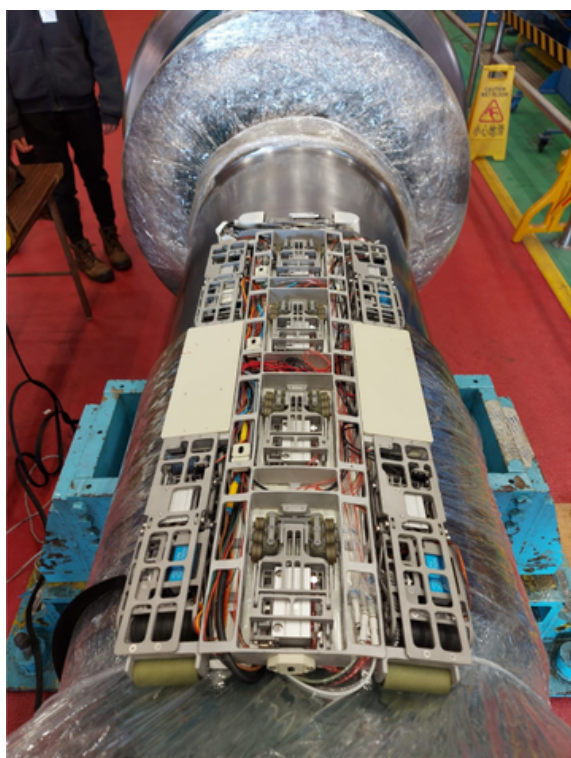

Our Underwater Robotics Team functions as a Talent Acquisition Platform. We build students' interest in robotics, hone their technical skills, and train them in creative problem-solving.

From Lab to Industry

Outstanding students identified from our competition teams are invited into our industrial project teams, where they are able to apply their skills to solving real-world, industry-relevant problems.

Notable Projects

Our industrial project team recently worked on an inspection robot for CLP.

Empowering Tomorrow's Leaders

Our ultimate goal as the Engineering Entrepreneurship Club is to empower students to realize their own ideas. Equipped with engineering skills and industry experience, we push our members to invent and innovate, instilling an entrepreneurial mindset.

Teamorz Limited

A start-up co-founded by an EEC member, Teamorz is rebuilding our marine ecosystem by deploying innovative Artificial Reefs.

SUSTAINABLE DEVELOPMENT GOALS

Giving Back, for the Future

Inspired by the UN Sustainable Development Goals (SDGs) for Quality Education and Industry, Innovation and Infrastructure, we give back to our community through various educational outreach efforts. By holding workshops and mini competitions, we hope to increase access to robotics, as well as inspire invention and innovation in the field.

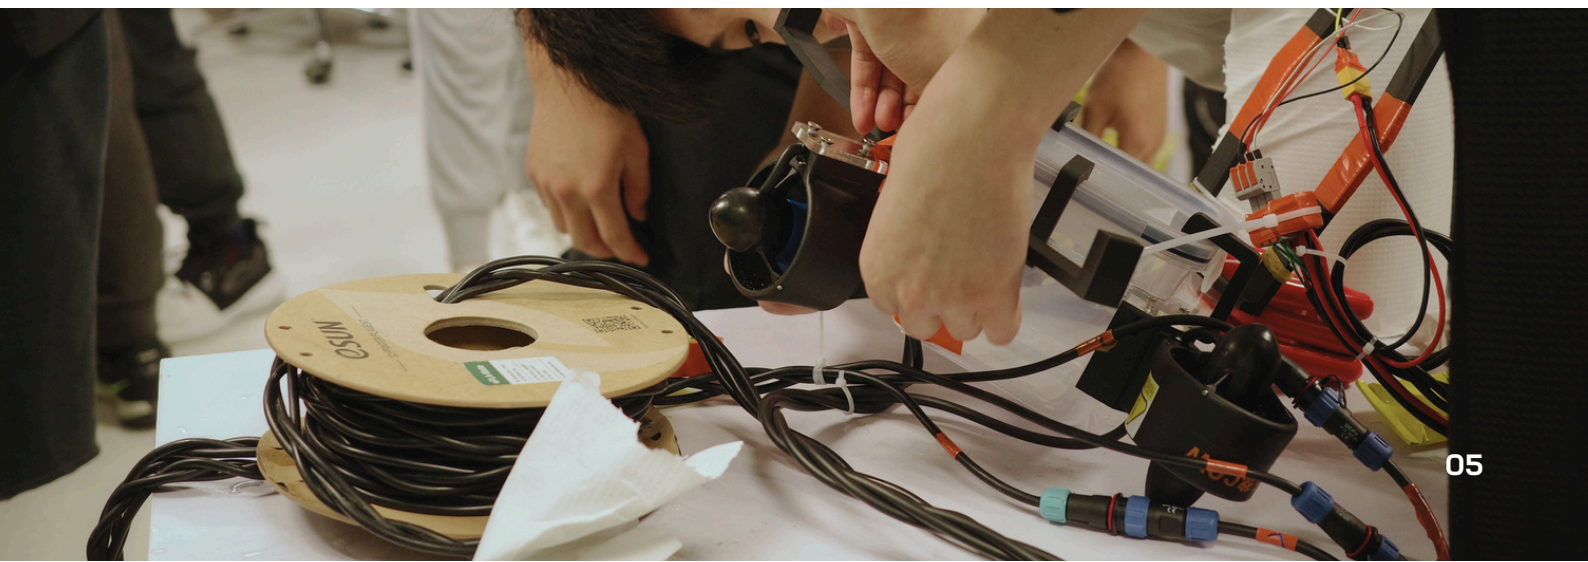

Our Achievements

Our team participates in two global robotics competitions: the Marine Advanced Technology Education Remotely Operated Vehicles (MATE ROV) competition as well as the Singapore Autonomous Underwater Vehicle Challenge (SAUVC). 2023 marked our inaugural year as an underwater robotics team. Despite that, we made a remarkable impact in 2024 by qualifying for the international finals of both the SAUVC and MATE competitions. Here are some of our key achievements:

- 7th Place, MATE ROV US Finals 2024
- 1st Runner Up, MATE ROV Hong Kong Regionals 2024
- Finalist (Top 10), Singapore AUV Challenge 2024

Our Impact

Over the past year, our team has mentored over 100 students across many departments at PolyU, providing hands-on experience in robotics development. Every year, we hold a mini-ROV competition open to all PolyU students that mimics global ROV competitions. We provide students with workshops and resources to build and test their own remotely operated vehicles (mini-ROVs). Over 70 students participate yearly, showcasing their own unique designs and solutions to real-world underwater challenges.

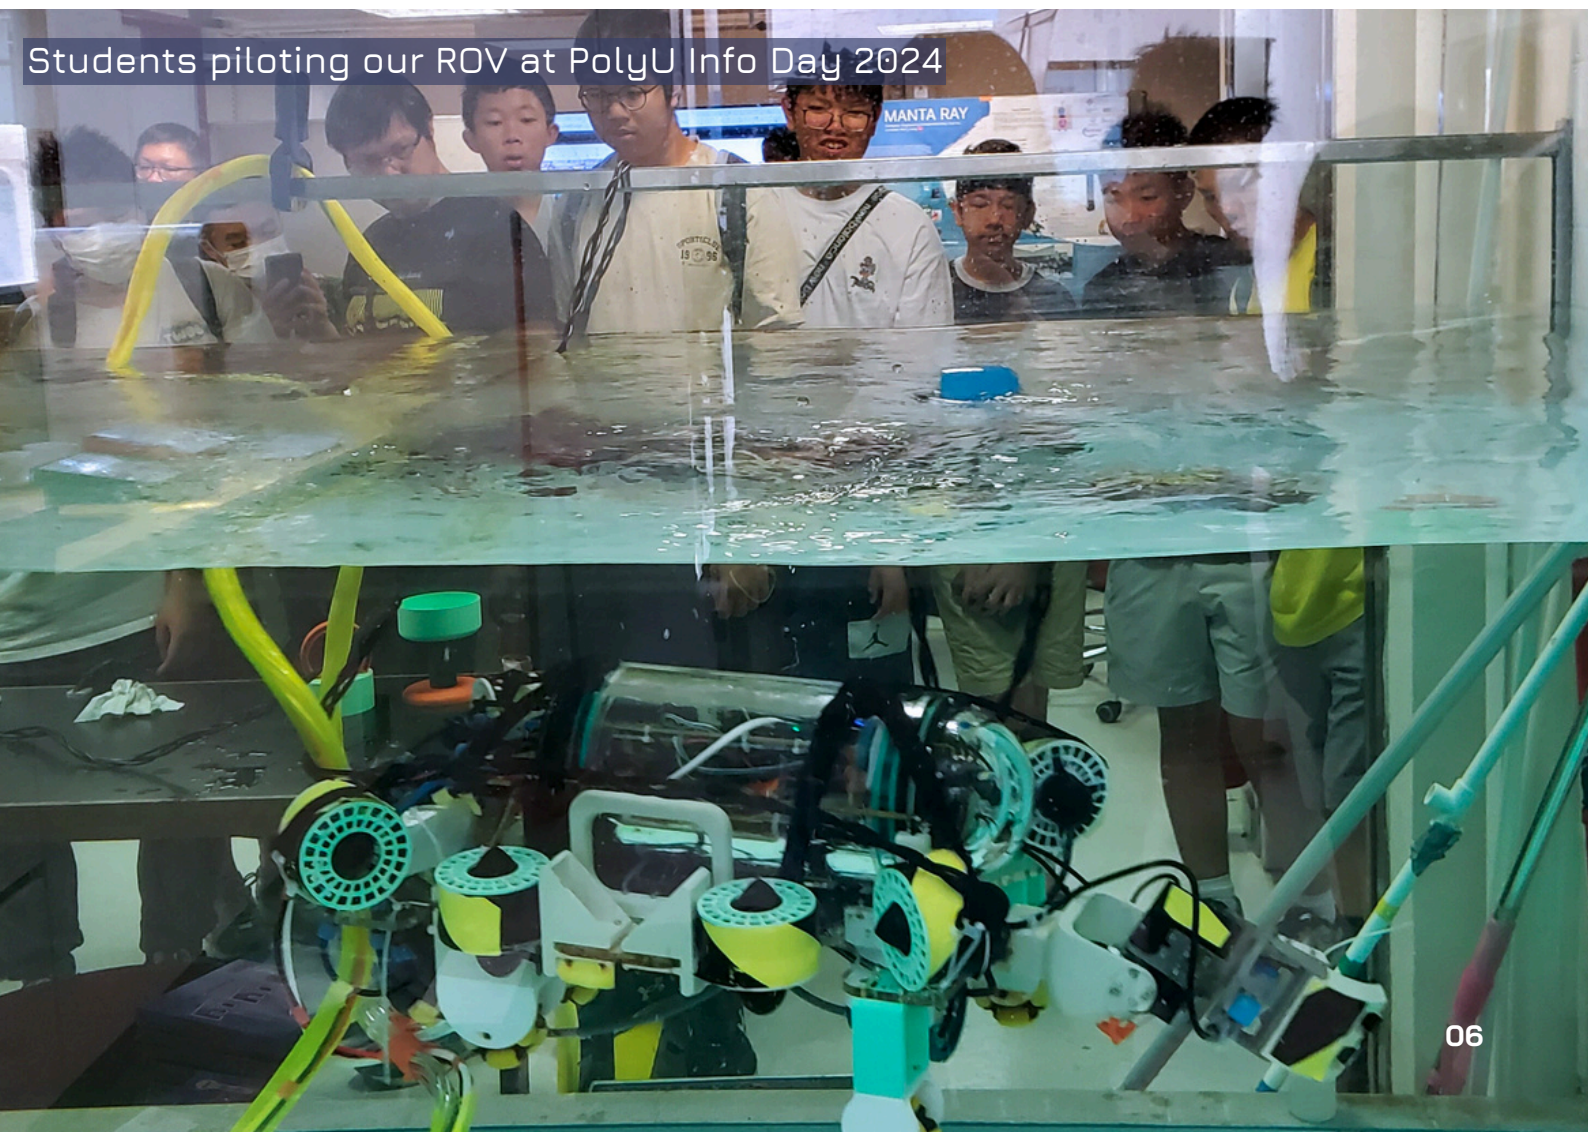

Outreach

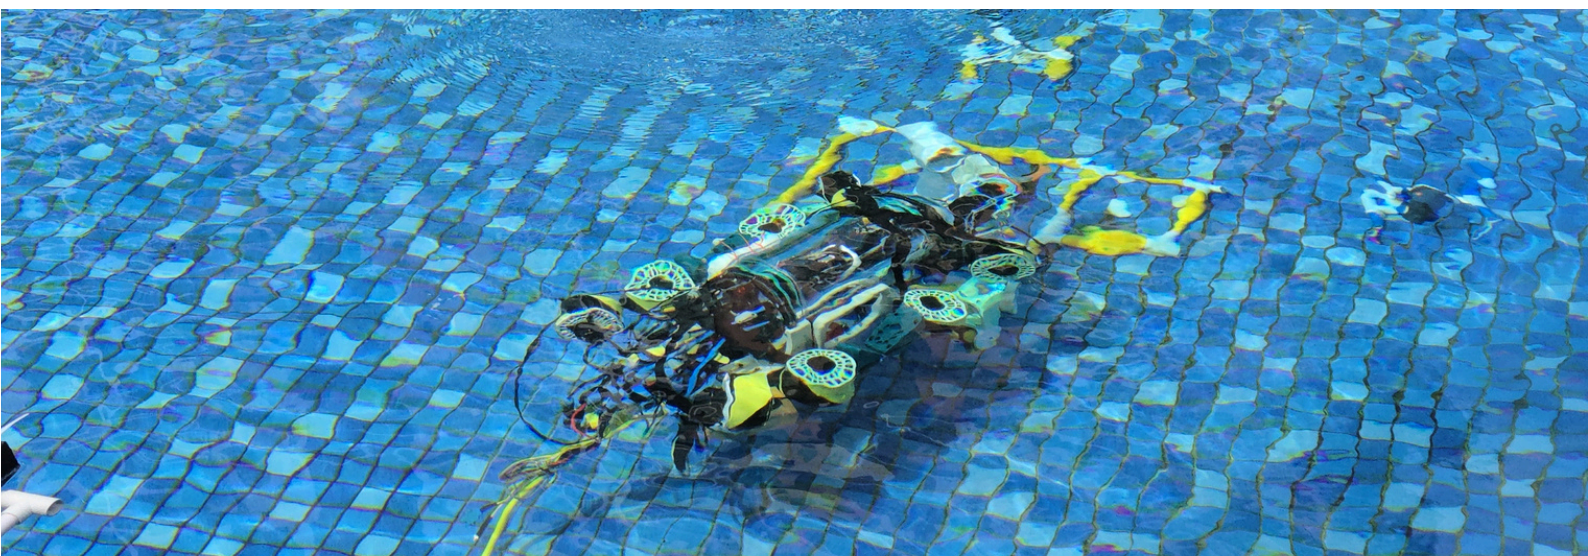

We are dedicated to advancing robotics education and fostering interest in STEM. We believe in inspiring the next generation of engineers and innovators, while also nurturing a sense of collaboration and community engagement. We regularly organize workshops and demonstrations to share our passion for robotics with our community.

Some of our activities:

- PolyU Info Day: club and team info session, ROV and mini-ROV piloting demo
- SciFest 2023: educational sessions on electronics and programming for the general public
- IET Hong Kong (annual): ROV and mini-ROV demos to local high school students

Students piloting our ROV at PolyU Info Day 2024

Sponsorship

By sponsoring the PolyU Underwater Robotics Team, you **align your brand with innovation and excellence**, showcasing your commitment to fostering talent in STEM fields. Your support will directly contribute to the development of cutting-edge underwater robotics, **positioning your organization as a leader in supporting the technology and education of the future**. Together, we can drive meaningful change and inspire the next generation of engineers and scientists.

Benefits

Featuring your brand on our team's social media, website, and promotional materials will provide invaluable exposure to the global underwater robotics community. Your brand will gain visibility among key stakeholders in the marine technology sector, including engineering professionals and aspiring leaders in STEM. This partnership not only enhances your brand's reputation but also positions you as a champion of innovation and education in a rapidly evolving field.

Sponsorship Tiers

Bronze Tier

From HKD 10,000 in monetary donations, goods, or services.

- Logo placement on our Instagram, Facebook, and website.
- Logo featured on team T-shirts.
- Logo featured on competition materials (posters, banners, etc.).

Silver Tier

From HKD 20,000 in monetary donations, goods, or services.

- Opportunity to have our ROV or mini-ROVs showcased at your company's event or activity.
- Logo placement on our ROVs.
- Includes all Bronze Tier benefits,

Gold Tier

Beyond HKD 30,000 in monetary donations, goods, or services.

- Recognition in the team's official name introduction during competitions.
- Active promotion of your company's products/services on our social media platforms.
- Includes all Bronze and Silver Tier benefits,
